Additive & Products

**J-Trend Systems Co., Ltd is d2w® Authorized Distributor
of Asia (Taiwan, China, Vietnam, Japan, Korea)**

The benefits of Plastic Packaging

- Lightweight
- Flexible
- Strong/Durable
- Heat sealable
- Impervious to moisture
- Printable
- Recyclable
- Reusable
- By-product of oil refining

Responsible use of plastic The Three R's

REDUCE: d2w[®] will reduce the burden of persistent plastic waste in the environment

REUSE: d2w[®] based products can continue to be reused for a finite

RECYCLE: d2w[®] based products can be recycled and made from recycled plastic polymers

Company Introduction

Plastic is fantastic! Plastic is strong, durable, versatile, lightweight, safe and inexpensive. It is made from a by-product of oil refining which would otherwise be wasted, so nobody is importing oil to make plastic products.

J-Trend Systems Co., Ltd. represents the biggest oxo-biodegradable plastic green supply chain from Asia and dedicates to develop degradable plastic end products and semi-finished products. "Green Bag Source, Earth Friendly, Environmentally Friendly, Eco-Friendly, and Eco-Compatible" are all ways we think describe our concerted effort and dedication to the environment and our planet. We strive to make available (to our customers) a wide variety of options that suit the growing demand on Green and Sustainable Packaging.

J-Trend Systems Co., Ltd offers choices to meet the challenges of Green and Sustainable Packaging initiatives. Not only just all of our poly products are made from recyclable polyethylene, but also we add an oxo-biodegradable additive called d2w® at the extrusion stage will make the finished product "oxo-biodegradable" so that it will degrade and disappear in a short timescale, leaving no fragments, no methane and no harmful residues.

Oxo-Biodegradable Technology

Plastic is fantastic when it is degradable

Plastic is strong, durable, versatile, lightweight, safe and inexpensive. It is made from a by-product of oil refining which would otherwise be wasted, so nobody is importing oil to make plastic products.

However, the problem identified by governments and NGOs around the world is that plastic does last rather too long if it gets into the environment and especially in the oceans.

Symphony from UK has found the answer to this problem. d2w[®] additive put into the plastic at the extrusion stage will make the finished product "oxo-biodegradable" so that it will degrade and disappear in a short timescale, leaving no fragments, no methane and no harmful residues.

Degradability is not a disposal option - you can still re-use and recycle - it is low cost insurance against the accumulation of plastic waste in the environment.

There is little or no on-cost, because d2w[®] environmentally-responsible plastic products are made with the same machinery and workforce as ordinary plastic and there is no need to change suppliers.

d2w[®] and the droplet logo are trademarks of a range of totally degradable flexible and semi-rigid

Green Statement

ISN'T PLASTIC FANTASTIC

Plastic is strong, durable, versatile, lightweight, safe and inexpensive. It is made from a by-product of oil refining which would otherwise be wasted, so nobody is importing plastic products. However, the problem identified by governments and NGOs around the world is that plastic does last rather too long if it gets into the environment and especially in the oceans. And there is solution to the everyday plastics we use which is d₂w[®] oxo-biodegradable additive putting into the plastic at the extrusion stage will make the finished product "oxo-biodegradable" so that it will degrade and disappear in a short timescale, leaving no fragments, no methane and no harmful residues.

A GLOBAL BRAND & PROVEN TECHNOLOGY

d₂w[®] and the droplet logo are trademarks of a range of totally degradable flexible and semi-rigid plastic products and pro-degradant additives which are sold worldwide. REDUCE: will reduce the burden of persistent plastic waste in the environment REUSE: based products can continue to be reused for a finite amount of time RECYCLE: based products can be recycled and made from recycled plastic polymers

DEGRADABLE PLASTIC GREEN SUPPLY CHAIN

There is a solution and it is available now by J-Trend Systems Co., Ltd with introducing the biggest oxo-biodegradable green supply chain from Asia using d₂w[®] oxo-biodegradable technology dedicatedly and wholeheartedly. J-Trend Systems Co., Ltd believes that there will be less and less plastic to be used in the world, and whenever you use plastics, green consumerism will urge to have green choice with innovative design, eco-friendly technology, and cost competitiveness – that is exactly the value we can bring for our customers from total supply chain integration and the same high quality products to our customers while promoting an unpolluted and healthy environment.

Product List

Grocery / Retail products

Garbage sacks
Bin liners
Carrier bags
Food freezer bags
Bread and Produce bags
Toilet and kitchen tissue wrap
Fruit bags
Fresh food packaging
Box liners
Flower wrapping film
Flower pots
Shrink wrap
Coffee bags
Dog waste bags
Nappy sacks

Agricultural

Mulching film
Banana sleeves
Protective tube for Trees

Medical / Healthcare

Cotton bud sticks
Aprons
Gloves
Clinical-waste sacks

Media

Stretch wrap
Magazine wrap and bags

Hotel / Catering

Cups and lids
Cutlery
Straws
Shampoo bottles and lids
Food trays
Food contact packaging
Milk bottles
Refuse sacks
Food, freezer and sandwich bags

Municipalities/Local Authorities

Garbage sacks
Dog waste bags

Airlines / Railways

Food trays
Cutlery
Garbage sacks

Various Trade Products

Zip-lock bags for garments
Garment covers
Garden refuse sacks
Heavy duty woven polypropylene sacks
for rubble, cement etc

Certification of d₂w[®] Additive

This is to certify the following verifications of the technical specification and performance of d₂w[®]:

d₂w[®] is an oxo-biodegradable additive that renders conventional polyolefin oxo-biodegradable

Oxo-Biodegradation; is defined as "Degradation identified as resulting from oxidative and cell-mediated phenomena, either simultaneously or successively." (source :- "Terminology in the field of degradable and biodegradable Polymers and Plastics" CEN TC 249/ WG 9).

Polyolefin products made with d₂w[®] additive will decompose in the presence of oxygen, into CO₂, water, mineral salts and biomass

No harmful residues result from the total degradation of the additive. The Ecotoxicity section of EN 13432, and Tier 3 of ASTM 6954-04 require that no harmful residues occur – this has been verified for d₂w[®]. Evidence; OWS Report MST-4/1-d2wb&d2wc.

Degradation has been proved in accordance with the requirements of ASTM 6954-04 Tier 1 by passing ASTM 5510 Degradation Standard. Evidence : RAPRA Report 46095.

The ability of d₂w[®] to comply with the biotic (Biodegradation) Tier 2 of ASTM 6954-04 has been demonstrated by the loss of molar mass achieved after degradation. Evidence : RAPRA Report 46303

The additive is safe for direct food contact according to the requirements of 2002/72/EC regulations for Direct Food Contact materials. Evidence : - RAPRA report 46137. It is however the responsibility of the manufacturers of products intended for food-contact to ensure that any other materials incorporated by them comply with this standard.

Polymer products made with d₂w[®] can comply with the EU Packaging Waste Directive 92/64/EC Essential Requirements Annex II.

All OWS and RAPRA reports can be accessed on Symphony's web site: www.degradable.net

biodegradable

Defining Degradability

Compostability

- The standard testing guidelines for compostability/biodegradability is based on *EN13432 (European norm) and *ASTM D 6400 (American norm)
- Both state CO₂ must be measured at a specific rate
- This is currently the only norm in the industry
- Neither comply with the EU Waste Directive Framework-March 1991
- Even naturally occurring lignocellulose (leaves, twigs, stems, sawdust) do not comply with ASTM 6400 and EN13432
- This standard definition is out of date and incompatible with the technical advances made in the plastics industry

Oxo-degradability

- The guideline for oxo-biodegradability is ASTM 6954-04
- A product that oxo-degrades eventually biodegrades - the greater the exposure to heat, air, UV, stress and microbes the quicker the degradation
- The additive facilitates the use of carbon release favourable to the environment as a food source
- UK formulating BSI 8472 standard for oxo-biodegradation
- Oxo-degradability composts well in high-heat closed vessels

Loop Handle Bag

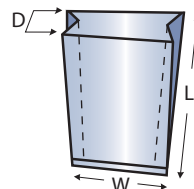

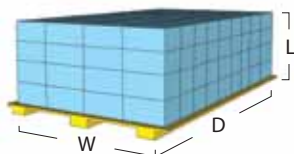

Soft Loop Handle Bag

Section 4

How to Measure for Gusseted Bags

Gusseted Bags

The length and width of gusseted bags are measured just like poly bags, by outside dimensions side to side and from top to bottom. The gusset is measured by its expansion diameter (D).

For Covers: Add approximately 4" to either width (W) or depth (D) for a loose fit. For length (L) add half of depth (D) to actual length.

(W) $46" + 4" = 50"$ **Size to Order**
 (D) $49" = 49"$ **50" x 49" x 75"**
 (L) $50" + 25" = 75"$

For an Inner Liner: Use the same procedure as above for width and depth. For length, add all of depth (D) to actual length plus 4" to 6" inches for overlapping the ends of liner. Add 10" to 12" if you plan

(W) $46" + 4" = 50"$ **Size to Order**
 (D) $49" = 49"$ **50" x 49" X 110"**
 (L) $50" + 49" + 11" = 110"$

Food Packaging Zipper Bag

Section 9

Defining Degradability

Compostability

- The standard testing guidelines for compostability/biodegradability is based on *EN13432 (European norm) and *ASTM D 6400 (American norm)
- Both state CO₂ must be measured at a specific rate
- This is currently the only norm in the industry
- Neither comply with the EU Waste Directive Framework-March 1991
- Even naturally occurring lignocellulose (leaves, twigs, stems, sawdust) do not comply with ASTM 6400 and EN13432
- This standard definition is out of date and incompatible with the technical advances made in the plastics industry

Oxo-degradability

- The guideline for oxo-biodegradability is ASTM 6954-04
- A product that oxo-degrades eventually biodegrades - the greater the exposure to heat, air, UV, stress and microbes the quicker the degradation
- The additive facilitates the use of carbon release favourable to the environment as a food source
- UK formulating BSI 8472 standard for oxo-biodegradation
- Oxo-degradability composts well in high-heat closed vessels

*ASTM: American Society for Testing and Materials
 *CEN: European Committee for Standardization

Industrial Packaging

Section 10

Industrial Packaging

The types of industrial packaging are pretty board which may include industrial film, wholesales packaging needs, and bulk buy packaging types. Here, our industrial packaging category focuses on industrial film that can be re-processed to become end product for further retail use, for example, BOPP, CPP, Stretch Film, Cast Film, and pp non woven. More importantly, they are all degradable and eco-friendly now!

Icons Story

Section 10

How to Measure for Gusseted Bags

Gusseted Bags

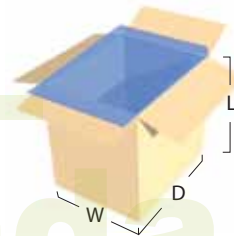

The length and width of gusseted bags are measured just like poly bags, by outside dimensions side to side and from top to bottom. The gusset is measured by its expansion diameter (D).

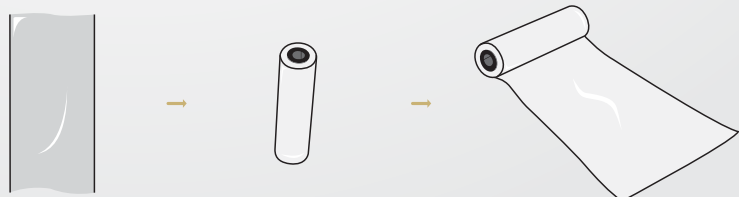

For Covers: Add approximately 4" to either with (W) or depth (D) for a loose fit. For length (L) add half of depth (D) to actual length.
 (W) 46" + 4" = 50" **Size to Order**
 (D) 49" = 49" **50" x 49" x 75"**
 (L) 50" + 25" = 75"

For an Inner Liner: Use the same procedure as above for width and depth. For length, add all of depth (D) to actual length plus 4" to 6" inches for overlapping the ends of liner. Add 10" to 12" if you plan

(W) 46" + 4" = 50" **Size to Order**
 (D) 49" = 49" **50" x 49" X 110"**
 (L) 50" + 49" + 11" = 110"

The types of industrial packaging are pretty board which may include industrial film, wholesales packaging needs, and bulk buy packaging types. Here, our industrial packaging category focuses on industrial film that can be re-processed to become end product for further retail use, for example, BOPP, CPP, Stretch Film, Cast Film, and pp non woven. More importantly, they are all degradable and eco-friendly now!
